QxP (PNP) is normally high, low to activate matrix transistor.  
QxN (NPN) is normally low, high to activate matrix transistor.

**TEENSY 3.2 MCU CONNECTIONS**

Teensy LC has Incoming USB power/programming on board. Because VIN-VUSB is cut on the back of the Teensy, power into the Teensy's USB port is routed in this order: TEENSY VUSB -> ON/OFF & LIPO -> 5V REG -> TEENSY VIN

Teensy 3V3 is only used for AREF and TeensyView. Current is limited, do not use for anything else.

SILKSCREEN UNDER TEENSY: CUT VIN-BUSB U2

PRIMARY USE 1 Core Plane

Spare IO

SPI Devices [OPTIONAL]

8 Core Plane Selector [OPTIONAL] Requires other modifications.

PRIMARY USE 1 Core Plane

Spare Analog

All analog-only pins (A10-A14), AREF, Program and Reset are 3.3V only.

Reads 1/4 voltage of +VSW (after RPP) before regulators.

RTC CLOCK BATTERY [OPTIONAL]

To use the Teensy 3.2 RTC you must add two things:  
1) Crystal: 32.768 kHz, 12.5 pF Citizen CFS-206, Digi-Key 300-8763-ND (5ppm) (on bottom side of the Teensy board, not shown in this schematic)  
2) Battery Holder: MPD BC-2003, Digi-Key BC-2003-TR-CT-ND  
3) Battery: 3V CR2032 Digi-Key P189-ND (battery and holder on backside of logic board)

INCLUDED:	
AMBIENT LIGHT SENSOR	0x29 (47)
HALL SENSOR 1	0x30 (48)
HALL SENSOR 2	0x31 (49)
HALL SENSOR 3	0x32 (50)
HALL SENSOR 4	0x33 (51)
EEPROM (BOARD ID)	0x57 (87)
OPTIONAL:	
OLED	0x3C (60)
ANDIXOR IO Exp. MCP23017	0x20 (32)
ANDIXOR EEPROM AT24C32r	0x50 (80)
NFC CLICK PN7120	0x50-53
PIMORONI UNICORN HAT	0x50 (N.C.)
All 7-bit addresses should be greater than 0x07 and less than 0x78 (120).	

To use more than 1 core plane:  
 1. Add 3-to-8 decoder 74HC238 and decoupling capacitor.  
 2. Cut both SJ pads 1-2 and solder pads 2-3.  
 3. Cut 4 SJs 9-12 on DRIVER Sheet near left 20p socket for CP5-8.  
 NOTES:  
 See Core Board schematic for other required CB changes.  
 SADB0 (LB) GPIO is still accessible as CP.ADDR.0 and 1, shared.  
 SADB2 (CB) GPIO becomes output [only] Y0 and Y1, of CP selector.  
 SPARE GPIO 1-2-3 are used for Core Plane Addressing.

## STANDARD KIT CONFIGURATION – AS MANUFACTURED

### TWO POWER INPUT SOURCES SELECTED BY SPDT SWITCH

#### SOURCE 1 "ON (BAT)"

BUILT-IN BATTERY PACK (Keystone 2482 or 2482CN) WITH 4X "AAA" primary/Alkaline Cells OK to use Energizer Ultimate Lithium (light weight!) with open cell 7.2V, loaded will be <7V. Battery Pack includes wires and may or may not have a 3-pin plug.

Optional Socket: TH, Side Entry, JST PA S03B-PASK-2(LF)(SN), Digikey 455-1848-ND

SILKSCREEN:

**7.5V MAX !!!**

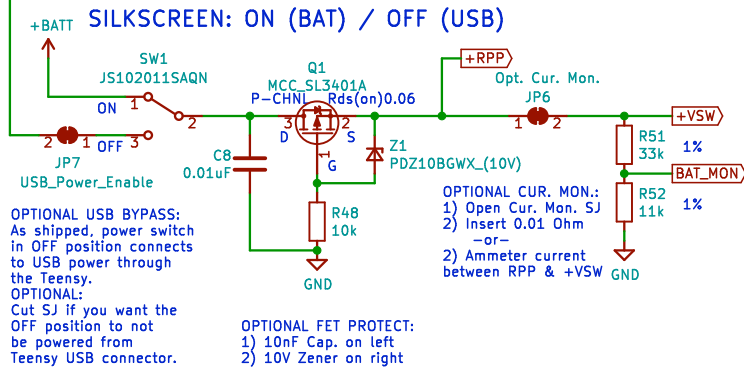

Limitation of 5V0 regulator.

#### SOURCE 2 "OFF (USB)"

USB 5V supplied through Teensy and optional LiPo Charger USB port. With the VIN-VUSB trace cut on the back of the Teensy, the TEENSY\_VUSB is taken off of the Teensy Board and routed on the Core64 LB to the lower position of the power switch. From here, it powers the whole Core64 system and routes back to the TEENSY\_VIN after passing through the 5V LDO regulator.

**\*\*\* ALL CONFIGURATIONS REQUIRE CUTTING VIN-VUSB TRACE ON BACK OF TEENSY \*\*\***

## POWER SWITCH, RPP, V & I MONITOR

## ALL SYSTEM GROUND

## POWER RAILS

## ALTERNATE 1S LIPO BATTERY – USER SUPPLIED

- 1) Remove the 4x "AAA" battery pack AND the battery connector.
- 2) Purchase and install a LiPo charge manager.
  - a) The board is designed to accept this one: <https://www.adafruit.com/product/1904> (Micro USB) and 4410 (USB C).
  - b) Solder the charge manager directly to the board to keep a low profile.
- 3) Purchase and install a 1S LiPo using double-sided tape.
  - a) Choose a 1S LiPo with built-in cell over/under voltage protection. Recommended: 2500mAh <https://www.adafruit.com/product/328> 1.8" x 2.4" x 0.26" (47mm x 61mm x 6.7mm) 2000mAh <https://www.adafruit.com/product/2011> 2.4" x 1.4" x 0.3" (60mm x 36mm x 7mm) 1200mAh <https://www.adafruit.com/product/258> 1.3" x 2.4" x 0.2" (34mm x 62mm x 5mm)
  - b) The LiPo can be up to 50 x 65 x 15mm. A maximum
  - a) Make sure no part of the LiPo foil pouch can short-out adjacent pins or pads in the area. Insulate with Kapton tape.

Configuration of the Teensy\_Charge\_Enable Solder Jumper (SJ):

#### A) DEFAULT SJ OPEN:

If you do NOT want the system to be powered from the USB port of the charger, leave the SJ open. Connecting a USB cable to the LiPo charger will ONLY charge the battery and power the system when the power switch is in ON (up/battery) position. Connecting a USB cable to the Teensy will NOT charge the battery, but it will power the system when the power switch is in OFF (down/USB) position.

#### B) OPTIONAL SJ CLOSED:

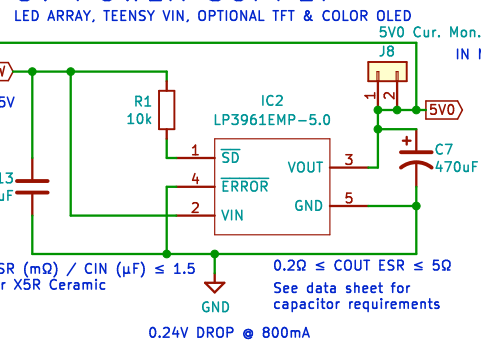

The LiPo charger 5V pin (LiPo Charger USB port) may be connected to the Teensy USB port by closing the SJ. Connecting a USB cable to the LiPo charger will charge the battery and power the system. It will not connect to the serial port of the Teensy. Connecting a USB cable to the Teensy will power the board and charge the battery and connect to the serial port of the Teensy.

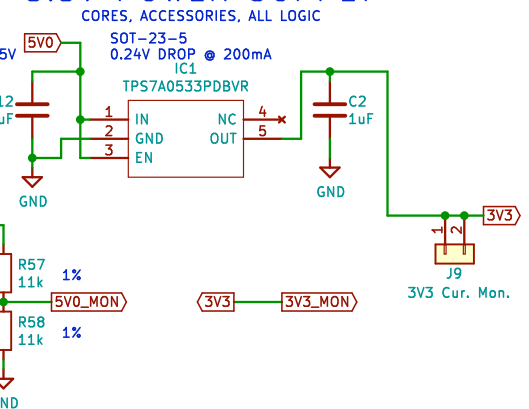

**1S LIPO ONLY !!!**  
**Do NOT connect AAAs to a LiPo charger!**  
**You will destroy the charging chip.**
